[LinkedIn](#) | [Portfolio](#) | [GitHub](#)

Full-stack developer pursuing an M.S. in Artificial Intelligence, with 30+ shipped projects across React/TypeScript, Node/Express, and Ruby on Rails—delivering scalable APIs, performant UIs, and clean, maintainable code. Completed 1,300+ hours of remote, test-driven development at Microverse; frequent code reviewer and mentor elevating code quality and best practices on distributed teams. Former coding instructor for 6 sections (40+ students/week), simplifying concepts in algorithms and problem-solving; ready to contribute to a collaborative team building real-world products.

SKILLS

Languages: C, C++, JavaScript, Ruby, Python.

Web Development: React, HTML5, CSS3, Redux, Tailwind, Bootstrap, SASS, Ruby on Rails(RoR), Express, Node, Typescript.

Databases: MongoDB, PostgreSQL, and MySQL.

Tools & Methods: Jest, React-testing Library, Vite, Git, GitHub, Docker, Cypress, REST API, Gitflow, Webpack, Netlify, Vercel, Rswag

PROFESSIONAL EXPERIENCE

Coding Instructor at FAST NUCES (2023 - 2024)

- **Mentored** upcoming programmers with short lectures to 6 sections of 40+ students every week.
- **Guided** students in logic-building, problem-solving, and algorithm analysis.
- **Reviewed** assignments weekly, providing feedback to improve code quality and problem-solving skills.

Full Stack Developer at Microverse (Jan, 2023 - Dec, 2023)

- **Developed** over 30 projects utilizing HTML, CSS, JavaScript, and Ruby on Rails, demonstrating proficiency in full-stack development.
- **Conducted** code reviews for colleagues, providing constructive feedback and suggesting improvements to enhance code quality and maintainability.
- **Mentored** new developers, offering technical support and guidance through code reviews to help them adapt to best practices and improve their coding skills.

EDUCATION

- NED University of Engineering and Technology (2026 - present)

Master's in Artificial Intelligence.

- Microverse (2022- 2023)

Spent 1300+ hours mastering algorithms, Data structures, and full-stack development while developing projects with HTML, CSS, Ruby on Rails, MERN, and Redux.

- FAST NUCES (2018- 2022)

Bachelor's in Computer Science.

PROJECTS

iNotebook (MERN Stack Developer) - [Repository](#)

- **Implemented** JWT tokens to secure user data, manage authorization, and refresh tokens to maintain active sessions.
- **Automated testing** with unit, integration, and end-to-end (E2E) tests to ensure robust application performance and reliability.
- **Utilized Docker** to create platform-agnostic images, facilitating consistent deployment across various environments.

- **Stack:** MERN, Redux, Tailwind, Jest, Cypress.

RI Inspection — Dynamic Survey & AI Recommendations Tool - [Private-Repo](#)

- **Developed** a dynamic form to collect inspection/survey details, adjusting questions based on user responses.
- **Connected** the app with the Gemini API to generate simple suggestions from the collected inputs.
- **Organized** user responses into a readable format so results and AI suggestions were easier to review.
- **Added** basic validation and error handling to make sure submissions and API calls worked reliably.

Car-BnB (React & RoR Full-Stack Developer) - [API](#) | [UI](#)

- **Collaborated** with 3 developers to build Car-BnB.
- **Integrated** Ruby on Rails API with React front-end for seamless cross-language communication.
- **Implemented** automated tests for both front-end and API to ensure quality and reliability.
- **Stack:** PostgreSQL, React, Redux, RoR, Capybara, Jest.

SnapScan (RoR Full-Stack Developer) - [Repository](#)

- **Implemented** user authentication and authorization using Devise.
- **Managed** and persisted user data, maintaining integrity and handling sub-categorical relations.
- **Conducted** unit and integration testing to ensure application reliability.
- **Stack:** Materialize, Rspec, Capybara, Ruby on Rails, and PostgreSQL.
